

## Sahi Pro powers Regression Testing of Cash Management and Loan Origination Systems from Integro

---

### About Integro (subsidiary of Aurionpro)

Integro Technologies is a Singapore-based technology provider of award-winning Loan Origination and Risk Management platforms and expert-level consulting services. Integro's flagship product, SmartLender, powers lending businesses for some of the most respected banks throughout Asia Pacific.

Integro ensures the success of each banking software implementation through focused consulting and application maintenance offerings, and provides a range of specialized services to complement enterprise IT initiatives.

Aurionpro, parent company of Integro Technologies, is a global technology solutions leader that helps clients accelerate their digital innovation, secure their enterprises and optimize business operations.

### Challenges

With numerous change requests being raised by banks from time to time on Integro's cash management and loan originating product, it became a challenge to ensure that every release provided by developer was good and stable. In addition, some new project joiners required more time to pick up the product knowledge. As a result, some testing scenarios were getting missed out during the regression testing. To solve these challenges, Integro started looking for a good automation tool which can assure the testing quality, in addition to providing script reusability.

Integro Technologies took some time to experience the benefits of Sahi Pro by downloading a fully functional trial version of Sahi Pro and receiving support while trying out the tool. They were able to justify that it was a good tool which can compete with other well-known tools in the Asian market.

### Solution

Sahi Pro test automation tool is being used to test Integro's banking solution and cash management system. In the journey of automated testing, Integro Technologies shall be adopting the automation testing process into different projects based on the designated timelines.

The test automation team at Integro is going through the evolution process whereby they are picking up the test automation knowledge in addition to their daily manual testing work. Unlike the traditional team structure which has separate automation and manual testing teams, Integro works on a pool concept. Herein, all QA (Quality Assurance) team members are trained to be excellent and expert in every testing domain.

### Benefits

Integro Technologies achieved the following benefits by adopting automation using Sahi Pro Web Test Automation tool:

- A savings of 90% on man hours of regression testing, wherein the team has automated thousands of test cases for a specific product. With Sahi Pro, the team just needed to spend 10% of the total time for result and fail case verification.
- Test Data preparation became easier by utilizing the replay function

- There was a reduction in the resource allocation for regression testing. The resources in the QA team could now be utilized for other task assignments while regression testing was auto run by Sahi Pro.
- Regression testing completed by Sahi Pro along with respective reports provided confidence to the stakeholders on the release quality.

### Customer Quote

The major reason we chose Sahi Pro was because it is light, simple and provides all the basic functions needed by us. Every team member is able to pick up in very short time as compared to other tools like HP and IBM Rational Tester.

Tan Lun Suan, QA Manager, Integro Technologies (subsidiary of Aurionpro)

### About Tyto Software (Creators of Sahi)

Sahi Pro, the flagship product of Tyto Software, with its simplicity and power, increases the efficiency and productivity of Quality Assurance and Testing teams in their web test automation process. Its features like good recorder, automatic waits, inbuilt frameworks, and automatic reporting reduces the team's technical expertise required, ensuring faster delivery cycles, especially in agile environments.

Headquartered in Bangalore, India, Tyto Software has helped more than 400 enterprise customers across diverse industry verticals including Banking and Financial Services, Healthcare, IT Services, IT Products, Retail, Media & Entertainment, Telecom and Government.
